

TRAINING TR-102 REPORT DAY 19

5 JULY 2024

Overview:

The nineteenth day of the training participants were introduced to TOTP (Time-based One Time Password) apps. They downloaded a TOTP app and set up two-factor authentication on their GitHub accounts.

TOTP (Time-based One-Time Password) Apps and Two-Factor Authentication (2FA):

- ☐ The session included an introduction to Time-based One-Time Password (TOTP) apps.
- ☐ The training included a detailed explanation of TOTP and its importance in enhancing security through two-factor authentication.
- ☐ Participants downloaded a TOTP app and used it to set up two-factor authentication on their GitHub accounts.
- ☐ Each participant successfully implemented 2FA on their GitHub account, ensuring an additional layer of security.

Conclusion:

On the nineteenth day of training, participants were introduced to Time-based One-Time Password apps and their role in enhancing security through two-factor authentication (2FA). They learned about the importance of 2FA in safeguarding accounts and successfully implemented it on their GitHub accounts using a TOTP app.
